Figure S1: Titration on native human spherical HDL into Gd-DTPA-DMPE (q=1) (□) or Gd-AAZTA-C17 (q=2) (■) in the presence of B-cyclodextrin 7.4mM. The samples were incubated for 2 hours at 37°C prior to R1 measurement at 20 MHz.
Figure S2: Titration on native human spherical HDL into Gd-AAZTA-C17 (q=2) at a complex concentration greater than the CMC (0.92 mM).
