Supplemental Figure 1 Phenotypic profiles of CD14^{+}CD16^{-} and CD14^{+\text{dim}}CD16^{+} monocytes in chronic HCV-infected patients, spontaneous HCV resolvers and health controls. (a-d) Frequency of HLA-DR (a), CD86 (b), CD80 (c) and PD-L1 (d) positive cells on CD14^{+}CD16^{-} and CD14^{+\text{dim}}CD16^{+} monocytes were analyzed. The black line represented the mean frequency of each marker in three different groups. HCV, hepatitis C virus.
