The football club doctor system

EDITOR,—I read with interest the paper by Waddington et al. highlighting the inadequacies of the football club doctor system in Britain. This paper confirms the situation that many people already knew existed.

Advertisements for club doctors are rarely published in medical journals, doctors normally being appointed on a “who you know” basis. It is also particularly disappointing that, at a time when any specialty of sports and exercise medicine is being established in this country, the majority of doctors working with professional footballers have no qualifications or little experience in the specialty. However, the problem is not confined to football clubs and probably also applies to rugby clubs and many other sporting associations.

One aspect not mentioned in the paper is medical litigation. It is to be hoped that doctors involved with football clubs have arranged medical defence cover, because, if a situation arises in which a player’s sporting career is threatened by medical mismanagement and the doctor involved has no professionally recognised sports medicine qualification, he or she could be found guilty of medical negligence. With the amount of money involved in professional football, this could lead to dire consequences for the club, the doctor’s career is threatened by medical mismanagement, and probably also applies to rugby clubs and many other sporting associations.

A similar recommendation by sports medicine authorities, by clubs, and by the Football Association. It goes without saying that he is also correct to point to the need for football clubs to adopt more realistic policies towards safeguarding their major assets, namely the health—and therefore also the playing ability—of their players.

Finally, we fully accept that, as Dr Boyce suggests, the situation that we document in relation to professional football may not be unique to that sport. We agree that there is a need to investigate all aspects of the provision of medical and physiotherapy care in other sports. In this regard, your readers may be interested to know that two of our colleagues at Leicester, Dr Ken Sheard and Dominic Malcolm, are now carrying out a similar study to our own, but in rugby union.

Sports medicine clinics on the NHS: a patient survey

EDITOR,—Following the recent success of the British team at the Sydney Olympics, media and medical attention appears to be preoccupied with the health and welfare of the “elite athlete”. However, the overwhelming majority of people who participate in sport in this country are not at an elite level. In fact, the term “athlete” may not even be correct. Many people participate in sport for the physical benefits of exercise and the personal enjoyment that it brings.

When these people are acutely injured, their first port of call is their GP or local A&E department. If physiotherapy is required, there is often a lengthy waiting period. For chronic or overuse injuries, the GP may not have the time, inclination, or qualifications to deal competently with their management. The opinion of an orthopaedic consultant is desired, six months or more may elapse before an appointment. Further time will be lost in waiting for investigations and/or surgery. For the “ordinary” sportsperson, over a year may pass before they can return to their sport for an injury that may be resolved in one to two months for an “elite athlete”. Of course, if a locally privately run sports medicine clinic exists, specialist input and quicker treatment can be offered, bypassing the NHS waiting lists. But this costs money and not everyone can afford to pay.

We randomly selected 40 people who attended the A&E department with a sports injury and were discharged to the care of their GP for follow up. A questionnaire was sent to each patient asking them “if a specialised sports medicine clinic was present at the hospital would you have preferred your injury to have received further treatment at this clinic rather than your local GP practice?”. A response rate of 47.5% was obtained; 99% would have preferred their injury to be reviewed at a sports medicine clinic. Various reasons were given for this preference, with many feeling that their GP was not interested or qualified to deal with their problem correctly. Most also felt that at a sports medicine clinic they would be treated by specialists in their field similar to that of any other hospital specialty outpatient clinic.

Although this survey targeted a possibly biased group, these are the majority of people with sporting injuries that we should be aiming to treat. The introduction of NHS based sports medicine clinics may be a few years away but the training of doctors to a specialist standard through regulated training schemes must start now.

New Zealand Olympic experience—Sydney 2000

EDITOR,—New Zealand’s Olympic medical team of four doctors, seven physiotherapists, one chiropractor, one massage therapist, and a sports psychologist provided medical care for a team of 150 athletes and 76 officials at the Sydney Olympic Games. During the month in Sydney, we provided 605 medical consultations and 1403 physiotherapy and chiropractic treatments, plus numerous massages.

All but one athlete was able to compete in their chosen event. For the athletes who required laboratory investigation or imaging, a comprehensive service was provided at the polyclinic within the Olympic Village. Special mention should be made of the superb organ imaging service organised by Dr Jock Anderson. Readers of the Journal may be interested to know of the rapid response to CT guided nerve root sleeve injections of corticosteroid. Three of our athletes with lumbar nerve root signs had these injections, and all were able to compete some 48 hours after injection. This epitomises the high standard of diagnostic and therapeutic intervention that was possible, and the impressive clinical results that could be achieved.

In summary, the Olympics represent the pinnacle of sporting excellence and I am pleased to report that the medical facilities available to athletes in Sydney were of the same high standard as the achievements of the competitors.
