REASON FOR WITHDRAWAL

July 2017

This review is being withdrawn by the Cochrane Review Group with the agreement of the authors, as, at the time of writing, 67 of the 737 studies included in the review have been retracted since the review was published, and there are also investigations ongoing for a number of other studies. Retracted studies and the analyses affected are listed below.

When this Cochrane Review was published there had already been some criticism of the studies authored by Fujii et al., and the authors of the Cochrane Review performed subgroup analyses that compared studies authored by Fujii et al with other studies (comparisons 13.01 to 13.09).

This review will now be split, updated and replaced following the publication of a new protocol ("Drugs for preventing postoperative nausea and vomiting in adults after general anaesthesia"). This version will remain withdrawn when the new review is published.

Analyses that include studies that have been retracted: 1.1, 1.2, 1.3, 1.4, 3.1, 3.2, 3.3, 3.4, 4.1, 4.2, 4.3, 4.4, 6.1, 6.2, 6.3, 6.4, 7.2, 7.5, 12.3, 12.8, 12.11, 12.15, 12.18, 12.20, 12.24, 12.27, 12.31, 12.34, 12.39, 12.42, 13.1, 13.2, 13.3, 13.4, 13.5, 13.6, 13.7, 13.8, 13.9.

Studies that have been retracted, listed by study IDs; please see the full text of the review for further information.
