Supplementary Information 3. Immunoreactive bands of the higher molecular-mass ubiquitinated fetuin [(GST-Ub)n-Fetuin] detected by anti-fetuin antibody were quantified by Image Gauge v3.2 (Fuji Film). For the details of ubiquitination assay by SCFFbs1, see the legend of Supplementary Information 5. The results are expressed as percent each intensity at 3 h that are subtracted that at 0 h compared to the intensity of ubiquitination of GTFat the ratio 1.5. The results shown are representative of two independent experiments. The results in top panel are shown in Fig. 4.
