eFirst—SBS Articles Published Ahead of Print

We are pleased to announce a new service for our authors and readers. Fast publication times are becoming more and more important in research. We therefore have introduced *eFirst* to publish articles well in advance of their publication in a print issue. As of February 2005, shortly after receiving the authors' corrections, articles of *Skull Base: An Interdisciplinary Approach* (SBS) will be available under *eFirst* in the digital journals database.

eFirst articles of SBS are accessible online via the page with the Journal's table of contents at www.thieme-connect.com, by clicking on the *eFirst* icon (this page is also readily accessible through the Journal's homepage at www.thieme.com/sbs, by clicking on "View this journal in Thieme-connect").

Of course, all articles that are electronically published first undergo the entire peer-review and assessment procedure. And, all articles published in *eFirst* are published later in the printed version of SBS, according to the regular print schedule. The date of online publication is now the definite publication date for each paper. The version of an article published in *eFirst* is, therefore, considered the final version and is fully citable. Thus, we will not be publishing "updated" or "corrected" versions of articles. Any errors found subsequently after online publication may only be corrected by publishing errata.

How can *eFirst* articles be cited? Since they are not assigned yet to a specific issue, bibliographic information, such as page ranges and issue numbers, are unknown. The articles can be cited, however, by way of their DOI (Digital Object Identifier). This is simply a unique code that specially identifies an online article. The DOI is included in both the

print and electronic versions. By using the DOI, it is also possible to search directly for that article on the internet. In addition, a DOI enables us to find the article in databases. For detailed information, consult www.doi.org. It should also be mentioned that articles published in *eFirst* are already included in the Medline database.

eFirst articles that have not yet been published in a print issue should be cited in this format:

Sarkar A, Link MJ. Distal anterior inferior cerebellar artery aneurysm masquerading as a cerebellopontine angle tumor: case report and review of literature. *Skull Base*. Published online October 27, 2004; DOI: 10.1055/s-2004-823772.

After the paper has been published in print it should be cited as follows:

Sarkar A, Link MJ. Distal anterior inferior cerebellar artery aneurysm masquerading as a cerebellopontine angle tumor: case report and review of literature. *Skull Base* 2004;14:101–108. Published online October 27, 2004; DOI: 10.1055/s-2004-823772.

As soon as the print version of the article is available, the statement "Now Published in Print" is added to the *eFirst* table of contents. At the same time, the article appears in the online version of the new issue. In *eFirst*, it will disappear 30 days after release of the print version.

The abstracts of articles are open to all visitors of *eFirst*. Subscribers to SBS additionally have access to the full text version, with the option to either read the searchable article in html, with active links, or to use the pdf format for download if

this is preferred. Finally, we strongly encourage all our readers to register for receiving the table of contents of *eFirst* articles via e-mail immediately after publication. For a free registration please go to "Table of contents via e-mail" at www.thieme-connect.com/ejournals/toc/sbs.

We are confident that *eFirst* will be received very well by our authors and readers. Thank you for your continued interest in *SBS*!

The editors and the publisher

PUBLISHER'S ANNOUNCEMENT

Dear Readers and Subscribers:

We are very pleased to announce that *Skull Base: An Interdisciplinary Approach* is enlarging its scope.

As of 2005, the quarterly review journal *Seminars in Neurosurgery* is incorporated into *Skull Base*. In addition to the usual mix of case reports and original articles that comprised the issues of *Skull Base*, topical reviews are increasing the content made available to our subscribers. The first series of reviews is on "Cerebral Revascularization."

I hope you will find the additional content of the journal enriching.

May I take this opportunity to present Thieme's very best wishes for the coming year.

Sincerely,
Daniel Schiff
