NEW INK FOR CUMULATIVE RECORDERS

A new type of ink mixture has been found superior in our laboratory over the Esterline-Angus ink and water mixture commonly used in Leeds & Northrup pens for a Gerbrands Cumulative Recorder.

The mixture consists of two parts of Varian Recorder ink and one part of J. C. Higgins "Eternal Black" drawing ink. The Higgins ink has a carbon base, which makes it possible to thermofax cumulative records when this mixture is used. The mixture is quicker-drying than the Esterline-Angus ink, but does not clog the capillary of the pen even when the recorder is not used for 12 hours.
