EDITOR'S QUIZ: GI SNAPSHOT

Unusual presentation of digestive tumour

Robin Spiller, editor

Clinical presentation

A 43-year-old woman was admitted because of a continuous periumbilical pain radiating to the superior left quadrant, with fever, chills, nausea, vomiting and diarrhoea. Physical examination showed pain and guarding in the left upper quadrant. Laboratory tests were found to be normal.

Question

What does the gastrograffin enema (fig 1) show and what are the possible diagnoses?

See page 1788 for answer
