The *Korean Journal of Radiology* Launches an Online Manuscript Submission and Tracking System for Peer Review

Jung-Eun Cheon, MD

Deputy Editor, *Korean Journal of Radiology*

Kyung Soo Lee, MD

Editor, *Korean Journal of Radiology*

The principal aim of the *Korean Journal of Radiology (KJR)* is to produce and propagate knowledge on radiologic imaging and the related sciences. Since the introduction of the full text online version of the *KJR*, the number of people accessing the *KJR* online at www.kjronline.org has progressively increased. Over the recent several years, the number of submissions to the *KJR* has also risen substantially and we are keenly aware of our responsibility to ensure that authors have maximum accessibility of the *KJR*. In order to attract the best submissions from potential authors, a journal should offer a fair and rapid review process to ensure that the published papers are easily and widely accessible. Therefore, we are pleased to inform authors and reviewers of the new online submission and review system at the *KJR*.

The online process provides an entirely secure portal and thus, it streamlines the review process to the benefit of both the authors and the reviewers. Authors are no longer required to mail hard copies of their manuscripts and they are able to check the status of their submissions at any time and from any computer or handheld device with Web access. An automated e-mail system provides both the

authors and reviewers with periodic updates on submissions and the review process for specific papers. The reviewers can quickly access manuscripts online and accept or decline the opportunity to review a specific submission. Updating the contact information and areas of expertise will be entirely automated and this will help ensure that papers are reviewed by the appropriate experts.

The website is scheduled to officially open in September 2005 for new submissions to the *KJR*. From this date onward, we will be encouraging all authors to submit their manuscript electronically. For the foreseeable future, however, we will continue to accept manuscripts on paper.

We have tried to make our electronic-submission process convenient and easy to use, and we have carefully tested the new system for the electronic submission of manuscripts. It has performed well, but the authors may find areas that can be made simpler or more user-friendly. We welcome any and all comments and suggestions on the new system. Send them by any means you like, but the easiest way is sending an e-mail note to kjr@radiology.or.kr. To submit a manuscript, authors should go to <http://esubmit.kjronline.org>.
