EMBO reports (2009) **10**, 953–957. doi:10.1038/embor.2009.195

We regret that the above Meeting Report, printed in the September issue of the journal, contained an error in the discussion of N. Kam's (Rehovot, Israel) presentation concerning neuron response to injury. The correct version of the text is printed below.

“As Kam noted, only the two-signals model would allow cells to have robust distance-dependent responses, with a distance sensitivity of ~10% of the total axon length.”
