Of switches and hourglasses: regulation of subcellular traffic in circadian clocks by phosphorylation

Özgür Tataroğlu & Tobias Schafmeier

EMBO reports (2010) 11, 927–935. doi:10.1038/embo.2010.174

Figure 3 of this Review was published containing an error introduced by the editorial office. The original figure was published with the thick black and thin dotted lines indicating that WCC is predominantly phosphorylated and subsequently retained in the cytosol during the Evening inverted, and the thick black line indicating that WCC is predominantly dephosphorylated at Night missing. The correct version of the figure is below. We apologize for any confusion this may have caused.
