A new polymorphic probe on chromosome 3p: λ LIB17-11 (D3S1092)

H.Li¹, F.Latif, K.Tory, M.Yao, M.L.Orcutt, B.Zbar and M.I.Lerman*

Laboratory of Immunobiology, National Cancer Institute, and ¹Biological Carcinogenesis and Development Program, Program Resources Inc., DynCorp, Frederick Cancer Research and Development Center, Frederick, MD 21701, USA

Source/Description: λ LIB17-11 is a 1.7 kb EcoRI fragment isolated from a Charon 21A human chromosome 3 library (1).

Polymorphism: MspI digestion of genomic DNA and hybridization with the probe detects a two-allele polymorphism: 6.0 kb (A1) and 5.0 kb (A2).

Frequency: Estimated from 120 unrelated Caucasians
A1:0.47
A2:0.53

Frequency of Heterozygosity: 0.5.

Not Polymorphic For: BamHI, BglII, DraI, EcoRI, HindIII, HinfI, PvuII, RsaI and TaqI.

Chromosomal Localization: Using a somatic cell hybrid panel (2) which was based on linkage groups anchored to physically localized markers, the probe was assigned to the short arm of chromosome 3 between 3p14-p21.

Mendelian Inheritance: Mendelian inheritance has been demonstrated in a two generation von Hippel-Lindau disease (VHL) family.

Probe Availability: Available for collaboration.

Acknowledgements: This project has been funded at least in part with Federal funds from the Department of Health and Human Services under contract number N01-CO-74102.

A new polymorphic probe on chromosome 3p: λ LIB46-27' (D3S635)

J.Delisio¹, F.Latif, G.M.Glenn, M.Yao, L.Geil¹, B.Zbar and M.I.Lerman*

Laboratory of Immunobiology, National Cancer Institute, and ¹Biological Carcinogenesis and Development Program, Program Resources Inc., DynCorp, Frederick Cancer Research and Development Center, Frederick, MD 21701, USA

Source/Description: λ LIB46-27' is a 2.6 kb EcoRI fragment isolated from a Charon 21A human chromosome 3 library (1).

Polymorphism: BglII digestion of genomic DNA and hybridization with the probe detects a two-allele polymorphism: 3.6 kb (A1) and 2.8 kb (A2).

Frequency: Estimated from 120 unrelated Caucasians
A1:0.8
A2:0.2

Frequency of Heterozygosity: 0.32.

Not Polymorphic For: BamHI, DraI, EcoRI, HindIII, HinfI, MspI, PvuII, RsaI and TaqI.

Chromosomal Localization: Using a somatic cell hybrid panel (2) which was based on linkage groups anchored to physically localized markers, the probe was assigned to the short arm of chromosome 3 between 3p21 and 3pter.

Mendelian Inheritance: Mendelian inheritance has been demonstrated in a two generation von Hippel-Lindau disease (VHL) family.

Probe Availability: Available for collaboration.

Acknowledgements: This project has been funded at least in part with Federal funds from the Department of Health and Human Services under contract number N01-CO-74102.
