The authors regret that the abstract for the above paper was incorrect. The correct abstract is:
We describe a case of intracerebral haemorrhage in the temporal lobe arising from a distal varix related to the venous outflow of an ipsilateral frontal arteriovenous malformation (AVM). AVM itself and associated arterial aneurysms are well-known risk factors for haemorrhage. In this patient, haemorrhage had occurred from a distal varix. This is the first reported case of successful endovascular embolisation of a frontal AVM with spontaneous regression of an associated remote varix.
