A note from the Editor-in-Chief

Nava Segev

Landes Bioscience; Chicago, IL USA and Department of Biological Sciences; University of Illinois at Chicago; Chicago, IL USA

In this closing issue of our second year, we added two new types of papers. The first type is “Methods and Technologies,” which are reports describing new methodologies, protocols or approaches relevant to researchers in the field of cellular logistics. The second is “Commentaries,” which are short and focused opinion articles, commentaries on papers recently published in *Cellular Logistics* or elsewhere or commentaries on significant conceptual changes, important trends or new directions in the field. While in this issue, the two papers that belong to the new types of papers are from members of our editorial board, we welcome such submissions from everyone in the field. The description of these types of reports can be found in our evolving submission site: www.landesbioscience.com/journals/cellularlogistics/guidelines/

Finally, I would like to thank the authors, reviewers and the publisher, who made it possible for us to continue with our missions. One main mission of the journal is to deal with debates in the field in a reasoned manner and we would like to ask the field for suggestions on issues that you would like to see resolved.
