Quiz

A 30-year-old male patient presented with a small, brown papule on the calf (Figure 1). By dermatoscopy one can see radial lines in some segments at the periphery and skin-colored and pink structureless zones (Figure 2). What is your diagnosis?

Figure 1. (A) Clinical picture of a small brown papule. (B) Clinical closeup. [Copyright: ©2012 Tschandl]

Figure 2. (A) Dermatoscopically, prominent radial lines can be seen at the periphery and skin-colored and pink structureless zones. (B) Dermatoscopic closeup. [Copyright: ©2012 Tschandl]

Please send your answer to dpc@derm101.com. The first correct answer will receive a complimentary copy of the book, *Dermatoscopy. An Algorithmic Method Based on Pattern Analysis* [Facultas Verlag, 2011].

The case and the answer to the question will be presented in the next issue of *Dermatology Practical and Conceptual*.

Answer to July 2012 quiz

The correct answer to the dermatoscopy quiz in the July 2012 issue is **spiradenoma**.

Please see article 9 of this issue of *Dermatology Practical and Conceptual* for a detailed description of this quiz case with dermoscopic/dermatopathologic correlation (<http://dx.doi.org/10.5826/dpc.0204a09>).
