Book review

Secondary Rhinoplasty, in: Meyer Rodolphe (Ed.), 2nd ed. Originally Published by Grune & Stratton, Orlando, 1988, Hardcover, 2002, XV, 491 p. 1800 illus., ISBN: 978-3-540-65884-9. Price: 309, 00€.

The book is related to the abnormalities that make secondary rhinoplasty necessary and challenging. Secondary rhinoplasty begins with the basic anatomy of the nose. Each region of the nose and its particular anatomy is analyzed and explained as a specific unit and as part of the total aspect of management. Reconstruction of the nose, biologic deteriorations, tumors, the effects of ageing and associated congenital abnormalities are also realistically dealt with. Nothing has been left out, and yet the primary value of this text is the presentation of the most optimal surgical methods of correction. In addition to special secondary techniques, the book includes extensive chapters on harelip nose, septal

perforation, and, in particular, nose reconstruction and nose construction in arrhinia. This book is the most complete work about nose surgery in the world.
