Department of Gastroenterology & Hepatology, Sir Ganga Ram Hospital, New Delhi, India

Sixty-two-year old male presented with history of low-grade fever, progressive abdominal swelling, weight loss and anorexia from the last one year. Patient was evaluated for the ascites in the peripheral hospital but diagnosis could not be made. Patient underwent

contrast-enhanced computed tomography (CECT) abdomen for the workup (Figure 1A), which helped in the diagnosis.

What is the diagnosis?

Figure 1 A: Case investigation—imaging.

(Answer on the page 87)

Keywords: pseudomyxoma peritonei, ascites, low SAAG, peritoneal cancer, malignant
