Molecular Shots

Mouse eye-sections showing Nestin expression in a retinal ischemia model. Immunofluorescent staining of mouse eye-sections for Nestin expression after 3.5 hours of pterygopalatine artery (PPA) ligation and 5 days of reperfusion as compared to control. (A) DAPI stained control section (B) Nestin expression in control (20X)

by Gillipsie Minhas, Department of Neurology, PGIMER, Chandigarh, INDIA

(C) DAPI stained PPA section (D) Section showing increased Nestin expression after PPA ligation (40X)
