Corrigendum

Complement as a multifaceted modulator of kidney transplant injury

Citation for this corrigendum: *J Clin Invest*. 2015;125(3):1365. doi:10.1172/JCI81182.

In the original article, it was incorrectly stated that “Human CD46 (murine homolog Crry), also known as membrane cofactor protein (MCP), has similar decay-accelerating function, but also exhibits cofactor activity.” Human CD46 has only cofactor activity; it does not have decay-accelerating activity. The corrected sentences appear below.

Page 2348:

Human CD46, also known as membrane cofactor protein (MCP), exhibits cofactor activity: in conjunction with soluble factor I, this membrane-bound regulator inactivates C3b to iC3b, thereby preventing reformation of the C3 convertase. The murine homolog of CD46, Crry, has both cofactor activity and decay-accelerating activity.

The authors regret the error.
