Special Meeting Sections

George A. O'Toole

Geisel School of Medicine at Dartmouth, Hanover, New Hampshire, USA

In this issue of the *Journal of Bacteriology* come special sections dedicated to the International Symposium on c-di-GMP Signaling in Bacteria held from 22 to 25 March 2015 in Berlin, Germany. There has been increasing research on c-di-GMP signaling in recent years as we have better understood the role of this cyclic dinucleotide in biofilm formation, virulence, and bacterial biology in general. Thus, the editors felt that a special focus on this meeting was appropriate for the journal. These special sections contain a Meeting Review, several minireviews, and a number of full-length articles, and don't miss the terrific cover image; all come from participants at the meeting who presented their studies in poster or oral format. We hope you enjoy this collection of

papers that represents some of the newest and most exciting work in the c-di-GMP field.
