1693, Fig 1E: The tubulin control hybridization was a misplaced one. Since we are
unable to locate the correct tubulin control hybridization that goes with the original
figure, another anti-base J blot and corresponding tubulin hybridization were pro-
duced. The DNA dot blot was first probed with anti-J to measure base J levels, and then
the same blot was hybridized with the tubulin probe. The hybridizations were then
spliced in order to present the samples that correspond to the indicated cell lines. The
corrected figure is shown below. The conclusion remains unchanged by this correction.
We apologize for any confusion this error might have caused.
