ERRATUM

The April 1, 2015, article by Ostronoff et al, entitled “Prognostic Significance of *NPM1* Mutations in the Absence of *FLT3*—Internal Tandem Duplication in Older Patients With Acute Myeloid Leukemia: A SWOG and UK National Cancer Research Institute/Medical Research Council Report” (J Clin Oncol 33:1157-1164, 2015), contained errors.

In Figure 2B, the y-axis label was given as “Overall Survival (probability)” whereas it should have read, “**Relapse-Free Survival (probability)**.”

In the discussion section, the first sentence was given as “Analyses from this large retrospective study demonstrate that

patients age 55 to 65 years harboring *NPM1* mutations and *FLT3*-ITDs have a significantly improved survival as compared with those without this genotype.” It should have read “Analyses from this large retrospective study demonstrate that patients age 55 to 65 years harboring *NPM1* mutations and **without** *FLT3*-ITDs have a significantly improved survival as compared with those without this genotype.”

The online version has been corrected in departure from the print. *Journal of Clinical Oncology* apologizes for the errors.
