To the Editor: I thank Dr. Abdulmajeed Al Abdulkareem for his interest. In Iran, in our department, as in many other departments of obstetrics, analgesics and pethidine are not routinely used. All of the patients participating in this trial completed standardized consent forms. The patient selected a study group themselves based on the information we provided. The research deputy of Kerman University of Medical Sciences approves our research.

Zahri Kamyabi, MD
