Erratum

The January 20, 2018 article by Schiffer, et al, entitled, “Platelet Transfusion for Patients with Cancer: American Society of Clinical Oncology Clinical Practice Guideline Update” (*J Clin Oncol* 10.1200/JCO.2017.76.1734), was published with errors.

On page 285, the second sentence after the subheading Platelet Count at Which Surgical or Invasive Procedures May Be Performed, reads: “Certain procedures, such as bone marrow aspirations and biopsies, and insertion or removal of central venous catheters, can be performed safely at counts $\geq 20 \times 10^9/L$.”

This sentence should have read: “Certain procedures, such as bone marrow aspirations and biopsies, and **removal of central venous catheters, can be performed safely at counts $< 20 \times 10^9/L$.**”

Also, on page 293, the 6th line after the subheading Clinical Question 9, reads: “Certain procedures, such as bone marrow aspirations and biopsies, and insertion or removal of central venous catheters, can be performed safely at counts $\geq 20 \times 10^9/L$.”

This sentence should have read: “Certain procedures, such as bone marrow aspirations and biopsies, and **removal of central venous catheters, can be performed safely at counts $< 20 \times 10^9/L$.**”

This has been corrected as of May 10, 2018. The authors apologize for the errors.

JCO—Exceptionally Quick Review Process

JCO offers a Rapid Review and Rapid Communications program that publishes novel, timely research online within **4-6 weeks of the original submission date**. This is made possible by a dynamic panel of editors with far-ranging specialties, supported by an immense database of respected scientific reviewers and biostatisticians.
