Corrigendum

In the article by H. Sachdeva and N. H. Barton (*GENETICS* 209: 1279–1303) entitled “Introgression of a Block of Genome Under Infinitesimal Selection,” an old version of Figure 2 was mistakenly submitted for publication, which incorrectly showed, in Figure 2, C and D, an exaggerated effect of selection on the distribution of block lengths and trait values. This exaggerated effect was caused by miscalculations.

The calculations have been corrected and Figure 2 has been replaced, showing a more modest effect. This correction does not affect the conclusions of the article.
