REASON FOR WITHDRAWAL

Supporting better health for those receiving care is central to Cochrane's mission to promote evidence-informed health decision-making by producing high quality, relevant, accessible systematic reviews and other synthesized research evidence.

The Cochrane Common Mental Disorders Group is currently undertaking a strategic portfolio assessment of all existing and planned reviews and protocols, including those relating to Chronic Fatigue Syndrome (CFS). During the course of our portfolio assessment, we are aiming to ensure that the most up to date evidence is available in the Cochrane Library to inform decision-making. This latest version of the review was published in 2009. The Cochrane Common Mental Disorders Group are therefore temporarily withdrawing this review, with the full support of the author team, to allow time to determine whether the evidence is up-to-date.

WHAT'S NEW

Last assessed as up-to-date: 23 January 2009.

Date	Event	Description
15 October 2018	Amended	Cochrane Review withdrawn from publication.

HISTORY

Protocol first published: Issue 1, 2007

Review first published: Issue 4, 2009

Date	Event	Description
10 September 2008	Amended	Converted to new review format.
13 November 2006	New citation required and conclusions have changed	Substantive amendment
