The June 1, 2004, article by Lev et al, entitled “Exposure of Melanoma Cells to Dacarbazine Results in Enhanced Tumor Growth and Metastasis In Vivo” (*J Clin Oncol* 10.1200/JCO.2004.11.070), contains an error.

The authors made an error in Figure 6, where the same micrograph was inadvertently inserted twice to represent IL-8 and MMP2 in the MeWo-D column. With more than 16 years elapsing

from the conduct of these experiments, the authors have informed *JCO* that the original micrographs are no longer available, but they confirm that the staining pattern for both IL-8 and MMP2 exhibited increased protein expression as compared to MeWo.

The authors apologize for this error.

Introducing Breakthrough®: A Global Summit for Oncology Innovators

October 11-13, 2019 | Bangkok, Thailand

Designed for the innovators, the thinkers, and the early adopters of clinical change, this inaugural ASCO event, co-hosted by the Thai Society of Clinical Oncology in collaboration with society partners throughout the region, will leverage the best of technology, science, and medical practice to transform the future of cancer care.

This is the first and only global summit for oncology innovators. With rapid changes in medicine, acceleration in technology, and exponential growth in our knowledge base, there is a greater need than ever before to come together across fields and share ideas to advance global cancer care.
