Volume 93, no. 12, e00257-19, 2019, <https://doi.org/10.1128/JVI.00257-19>. Page 8, Fig. 4M: Western blot data for ARPE-19, A549, and MRC-5 cells are incorrect because inactivated interferon gamma (IFN- γ) was used by mistake.

The corrected blot (Fig. 4M) should appear as shown below.

IFN- γ completely reduced IE62 expression in ARPE-19, A549, and MRC-5 cells. In addition, IFN- γ slightly reduced IE62 expression in MeWo cells. This result is consistent with the results shown in Fig. 1C to D, in which IFN- γ reduced the IE62 expression level and inhibited varicella-zoster virus (VZV) replication in a cell line-dependent manner.

We apologize for this error, which does not affect the conclusions of the paper.
